CS110 / INDEPENDENCE ROAD

pitch / Jonathan Pacheco

Issued: Nov 10, 2026, 2:40 PM Pacific

Record: FORM-C103AB4D637529014D1B3044

Personal public verification code: VIEW-C1DF8802051C3182CACFD51C

Include your own public code with every assignment, even in a team folder. Never submit your private recovery key.

SHA-256: c70f1d537896ce15fd7eba81a320d1edb988653fb2aeb0a1910767fe319aa5c9

Verify the record number at courses.addp2p.com/development-road/independence/index.html?view=verify

An issued record preserves submitted information. It is not a grade or proof of comprehension.

What do you understand about the work and finish line?

The job in itself is to be part of a team but also understand that as an individual you have lots to do for yourself and the team. The finish line is always changing, and each small step was the previous finish line, I can relate this to when you are creating something like a game or a book you have multiple steps to complete before reaching the end. The end can be the beginning of the next project.

What will you contribute? Name a task or useful capability.

I believe that I bring organization and leadership to a team, I like to stay organized and make sure that we all can access what we need to and when we need to. Id say that my leadership skills are something that I can contribute, and have previously contributed in past projects. In the Slideshow, Lov3rs Plaza, and Sharksweeper projects I have been the team leader and have been in charge of setting up and distributing the work load to the correct individuals based on their skills. I had been in charge of managing the main repository making sure that assignments get done in time for submission.

What needs research, support or practice?

I think that my knowledge in coding would be classified as basic, meaning that I have been brushing up in my skills and trying more solo projects to further those skills. I think that understanding the code is important but so is understanding the story.

Your available work times and preferred contact method: Discord, email, text, classroom or other. Keep private addresses/numbers outside public exports.

Preferred contact: Text

I dont have a set work schedule so somedays I open others I close, I can be contacted and can respond at any time

List your project tools and why you need them.

Some of the most useful tools that I will be using are Youtube, Spotify and A.I such as Gemini and Chatgpt. I would say that these tools are important to me because I have learned so much from youtube, I dont have to stay with one way of understanding things because there is always another video that will teach it differently. Music is an important part of my life and Spotify helps me focus and create a mood for the project that I am working. A.I is one of the most powerful tools not only for this class but in general because it can help in areas that I am lacking and bounce ideas.

Required: name the AI you will use, its project task and how you will verify its output. Use course-provided/shared or approved local access if needed; no personal or paid AI account is required.

AI: Chat GPT and Gemini

Task: Serve as a pool of information where I can ask questions or for clarification.

Verification: I will not take it as face value but will ask for references and will look for other sources. I can relate to using AI with English and Math, I have used it to help me understand math concepts or to use example to clarify.
